

Cryptic Logic Untangled

This is a do-it-yourself course for anyone interested in learning about cryptic crosswords. Each module in the list below looks at a particular cryptic clue-type with:

- An explanation of how it works.
- A crossword to solve where all the clues are of that type.
- Answers.

Each module is self-contained but, taken together, they form a complete course on solving cryptic crosswords to an introductory level.

There are 11 topics in the full set, covering:

1. [Double Definitions](#)
2. Anagrams
3. Charades
4. Homophones
5. Reversals & Hiddens
6. Codes
7. Containers
8. Manipulations
9. Hybrids
10. Puns & Rebuses
11. All Types - Revision

This is a work-in-progress:

- Underlined topics are links that will take you to a finished module.
- Others are still being built.
- A new module will be released every 2 or 3 weeks until the set is finished.

Any members who would like more detailed notes or have questions about this course, please contact John McKinnon at jmc33466@gmail.com .
